

# Aluminum Balconies

## Bring the outdoors inside with a new aluminum balcony.

Aluminum balconies make it possible to add an outdoor living space to almost any room. They are designed to fit standard sliding glass door openings (5' or 6' wide), although they can be designed to fit custom size needs as well\*. The design lets us simply bolt this one piece unit into the existing framing in your house. If you don't have a slider, let us put one in for you. We can usually install both the slider and the balcony in one day leaving you to enjoy your new outdoor access that very evening.

Aluminum balconies can emphasize the existing style of any home. Together we can create a design that blends perfectly with your rustic NW home, or your sleek contemporary abode. They are perfect for courtyards or above patios.

As with all of our products these balconies are a virtually maintenance free product.

Whether your installing a new balcony to bring the outdoors in or to add some style to your home's appearance you will find that it will suit your needs plus more.

\*site specific engineering may be provided at an additional cost.

## Simply Bolts On

A lightweight, welded, all aluminum design makes this possible.

## Many Styles Available

Almost any style of railing we offer can be made into a one piece balcony.

## Dramatic Architectural Impact

One inexpensive balcony can alter the entire appearance of any exterior facade.
