

Aluminum Railing Systems

No Hassle

The combination of powder coated aluminum and Stainless Steel make for a virtually maintenance free railing.

Minimalist Design

Every component keeps with the idea that less is more. From the small button style cable ends to the optional bracketless fascia mount installation.

Interior Use

Our cable railing doesn't have to stay outside. With countless colors and configurations, 5 Point's craftsmanship and attention to quality make it a natural fit for interior stairs and lofts.

Stainless Steel Cable Railing

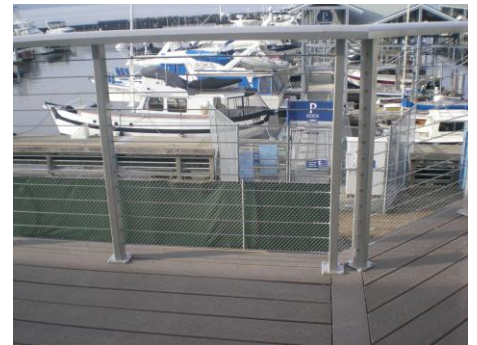

5 Point's Stainless Steel Cable Railing Systems are an affordable alternative to many similar commercial grade systems. We have combined the affordable pre-engineered aluminum components with 3/16" S.S cable to create a complete code compliant system. This can open up many configurations of post size and shape, top rail profiles, and attachment methods. You can even add a wood top rail. All of the aluminum components are factory powder coated to meet one of the toughest architectural standards, the AAMA 2604.

- By using the same components as the Glass and Picket railing systems we can combine the hassle free benefits of a powder coated aluminum frame with the modern style of S.S. cable.

- 3/16" Stainless Steel cables and slim line button style cable ends are always the standard.

- Safe and sturdy product design for peace of mind.

Seemingly invisible providing unobstructed views in any weather.

Quality is a Mindset

All facets of design, fabrication, and installation are completed with durability and craftsmanship in mind.

Superior Materials

Stainless steel fasteners, quality sealants, all aluminum construction, and factory powder coating are all part of a railing system designed to handle our NW climate.

Custom Solutions

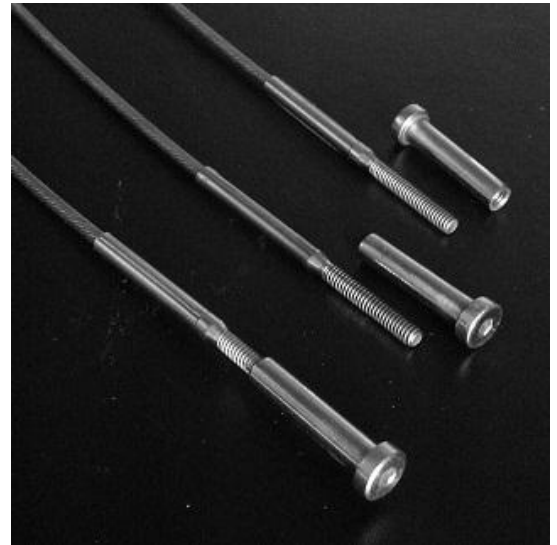

We can easily meet the most difficult and unusual fabrication and installation needs

5 Point's Stainless Steel Cable Railing Systems are designed with both style and views in mind. They can be used as a primary architectural feature on the front of a home or inside. They can also be used to provide clear sightlines from a deck or balcony, and unlike glass they will never fog up or need cleaning

Cable Ends Designed for Cable Railing

Our cable ends are sleek and small. You won't see any turnbuckles or large cap nuts.

The 5 Point Stainless Steel Cable Railing System is designed to meet current guardrail code requirements. The components used are specifically designed for cable railing.
